

Multi-Leg Flight Lookup

Some flight numbers fly several legs in one day (a Southwest through-flight can run RNO → LAS → TUL → BNA under a single number). The flight lookup now finds every leg the number flies that day and lets you pick the one that belongs on your schedule — no more auto-filling the wrong segment.

Where: FreePro → open a shoot → Logistics → Travel → **+ Add Flight** → Flight Number + Date → **Look up**.

HOW IT WORKS

1. Enter the **flight number** (e.g. WN3723) and the **travel date**, then click **Look up**.
2. A **Flight Leg** dropdown appears under the row listing every leg that day — route plus local depart/arrive times.
3. Multi-leg flights start on “— **Select a leg** —” (highlighted orange) so a leg is always chosen deliberately; single-leg flights auto-select and fill.
4. Picking a leg fills the route, times, airline, and live status. Every field stays editable before saving.

GOOD TO KNOW

1. Lookups can take a few seconds — the flight-data plan is rate-limited, so multi-part searches are paced automatically.
2. Live flight statuses track the **selected leg** (matched by origin airport), not just the day’s first departure.
3. If the data provider is missing a leg, enter it manually — the form fields accept anything.

WHAT YOU’LL SEE

Add Flight

FLIGHT NUMBER + DATE — AUTO-FILLS ROUTE, TIMES & STATUS

WN3723

08/09/2026

Look up

THIS FLIGHT FLIES 3 LEGS THAT DAY — SELECT THE LEG FOR THIS SCHEDULE:

— Select a leg —

RNO → LAS · Aug 9, 8:55 AM – 10:20 AM

LAS → TUL · Aug 9, 11:00 AM – 3:50 PM

TUL → BNA · Aug 9, 4:30 PM – 6:05 PM

The picked leg flows through to the schedule, call sheets, and the live flight-status badges on the Travel tab.
